Advancing Agility in Health Care Systems: Applying the INCOSE Agile Systems Engineering Life Cycle Management Pattern

3. System of Innovation (SOI)
   - Learning & Knowledge Manager for LC Managers of Target System
   - Life Cycle Manager of LC Managers

2. Target System (and Component) Life Cycle Domain System
   - Learning & Knowledge Manager for Target System
   - LC Manager of Target System

1. Target System
   - Target Environment

(Substantially all the ISO15288 processes are included in all four Manager roles)
Abstract

• During the 2016 Agile Health Care Systems Conference, a break-out group worked on application of the INCOSE Agile Systems Engineering Life Cycle Management (ASELCM) Pattern, applied to the health care domain. This led to identification of perceived priority targets for increased agility in the health care domain.

• This session will briefly review their conclusions, then provide a means for participants to apply the pattern further, along with another INCOSE planning instrument, in the public forum offered by the conference as well as confidentially when they return to their home enterprises.

Health Care Systems and Agility

• Viewed at almost any level—individuals, products, enterprises, market segments, or society—Health Care appears as a vast and complex system.
Health Care Systems and Agility

• Since there are countless challenges and opportunities for progress, how can an enterprise, industry, society, or individual systematically plan and manage future progress and innovation?
  – Where can we best apply the principles and lessons of Systems Engineering, deeper Agility, or Lean Methods to make optimal progress today, tomorrow, and in the future?
  – Is there a systemic approach to map-making for planning this progress?
Roughly speaking, in referring to “agility”, we mean ability to respond effectively to the challenges of uncertainty and rates of change in environment, stakeholders, competition, technologies, capacities, capabilities.

This includes learning and adjusting.

Not just “going faster”.
Health Care Systems and Agility

• This session will include brief overviews of the:
  – INCOSE Agile Systems Engineering Life Cycle Management (ASELCM) Pattern being developed by the INCOSE ASELCM Discovery Project,
  – INCOSE MBSE Planning and Assessment Roadmap being developed by the MBSE Transformation Project,
  – INCOSE Model VVUQ Pattern being developed by INCOSE as part of the ASME Model Validation and Verification Project,
• And,
  – Break out: “Test drive” some of these, to map “hot spots” and opportunities for progress
  – Take home: Plus, resources to use privately after the conference.
The INCOSE parent society is sponsoring the Agile Systems Engineering Life Cycle Model (ASELCM) Discovery Project:

- Based on a series of workshop clinics being held at case study discovery host enterprise sites

This project, now underway, will provide INCOSE inputs to a future version of ISO 15288, to improve explicit understanding of principles and practices of agility as applicable to systems engineering across different domains.

- So far, three case studies and an overview have been published in INCOSE and IEEE conference proceedings, with continuing work underway
- Your company can host such an INCOSE discovery workshop

Support from INCOSE Agile Systems WG and MBSE Patterns WG:

- Rick Dove, project lead, co-leads Kevin Forsberg, Jack Ring, Garry Roedler, Bill Schindel
INCOSE: Agility in General Systems Engineering

Longer history than just Agile Software Development Methods:

– For history and background, see Dove and LaBarge, 2014
– Agile software methods, by far better known, are related.
– General Agile Systems Engineering is the related broader subject of the INCOSE ASELCM Project.
Optimized Feedback & Correction Cycle Rate: A Hallmark of Agile Methods & Problem Space

An Apollo 11 Mission Question: Why was the Saturn V rocket engines’ directional gimbals update cycle period throughout the Ascent Phase ~ 2 seconds, but the update cycle period of course direction during the Free Flight Phase was ~ 26 hours?

Ascent Phase Updates:
- Saturn V Launch Vehicle
- Engine Gimbal Feedback
- Control Loop Update Period
  $\Delta t \sim 2\text{ seconds}$

Free Flight Phase Updates:
- Time to Mid-Course Correction:
  $\Delta t \sim 26\text{ hours, 44 minutes}$
System Life Cycle Trajectories in S*Space

- Configurations change over life cycles, during development and subsequently
- Trajectories (configuration paths) in S*Space
- Effective tracking of trajectories
- History of dynamical paths in science and math
- Differential path representation: compression, equations of motion

Evolution of Systems Over Multiple Life Cycles

Path as a series of system configurations, through iterations of the SE process

I. Innovation, Risk, Agility, and Learning, Viewed as Optimal Control & Estimation

William D. (Bill) Schindel
ICTT System Sciences
schinde@ictt.com

Abstract. This paper summarizes how a well-understood problem—optimal control and estimation in “noisy” environments—provides a framework to advance understanding of a well-known but less well-mastered problem—system innovation life cycles and management of decision risks and learning. The ISO15288 process framework and its exposition in the INCOSE SE Handbook describe system development and other life cycle processes. Concerns about improving the performance of processes in dynamic, uncertain, and changing environments are partly addressed by “agile” systems engineering approaches. Both are typically described in the procedural language of business processes, so it is not always clear whether the different approaches are fundamentally at odds, or just different sides of the same coin. Describing the target system, its environment, and the life cycle management processes using models of dynamical systems allows us to apply earlier technical tools, such as the theory of optimal control in noisy environments, to emerging innovation methods.
How are Agile Systems Related to MBSE?

1. **Basics**: Using explicit models, MBSE/PBSE adds clarity to pre-model descriptions of Agile Systems and Agile SE-- improves understanding of Agile Systems.

2. **More important**: MBSE/PBSE complements and improves the capability of Agile Systems and Agile Systems Engineering—
   - Agility requires persistent memory & learning—*being forgetful/not learning impacts agility*.
   - Patterns capture & retain learning, as persistent, re-usable, configurable, models, *updated as experience accumulates*.
   - S*Patterns are configurable, reusable S*Models.

“**PBSE as Agile MBSE**” emerges as essential when competing on agility becomes reality for competing, competent players:

- Improved: “Where are we?”
- Improved: “Where are we going?”
- Improved: “We’ve been here before.”
- Improved: Understanding of response.
- Improved: Understanding of mission envelopes.
- Improved: Ability to assess agility
- Improved: Ability to plan agility

Vital for Scrum, other approaches

Vital for Response Situation Analysis (RSA, Dove)
Maps vs. Itineraries -- SE Information vs. SE Process

- The SE Process consumes and produces information.
- But, SE historically emphasizes process over information. (Evidence: Ink & effort spent describing standard process versus standard information.)
- Ever happen? -- Junior staff completes all the process steps, all the boxes are checked, but outcome is not okay.
- Recent discoveries about ancient navigators: Maps vs. Itineraries.
- The geometrization of Algebra and Function spaces (Descartes, Hilbert)
- Knowing where you are, not just what you are doing.
- Knowing where you are going, not just what you are doing.
- Distance metrics, inner products, projections, decompositions.
Maps vs. Itineraries -- SE Information vs. SE Process

- Model-based Patterns in S*Space.
- Interactions as the basis of all laws of physical sciences.
- Relationships, not procedures, are the fruits of science used by engineers: Newton’s laws, Maxwell’s Equations.
- Immediate connection to Agility: knowing where you are--starting with better definition of what “where” means. There is a minimal “genome” (S*Metamodel) that provides a practical way to capture, record, and understand—the “smallest model of a system”.
- Not giving up process: MBSE/PBSE version of ISO/IEC 15288.
The ASELCM Pattern, Applied to Health Care Systems

• We will particularly refer to three major system boundaries:
  – To avoid a confusion bog of loaded terms, we could have just named them “System 1”, “System 2”, and “System 3” and proceeded to define them behaviorally.
  – The definitions are behavioral because these are logical systems, performing defined roles.
  – However, we will also give them more specific names — but make sure you understand the definitions of these systems, which are more important than their names . . .
The Agile System Life Cycle Management Domain Model

- System 1: Target system of interest, to be engineered or improved.
- System 2: The environment of (interacting with) S1, including all the life cycle management systems of S1, including learning about S1.
- System 3: The life cycle management systems for S2, including learning about S2.
Behind the “iconic” diagram, there is a formal MBSE model that describes the ASELCM Pattern.
Example: **Health care domain, top level**

(Substantially all the ISO15288 processes are included in all four Manager roles)

Health Care Domain Reference Boundaries:
Agile System Life Cycle Management Perspective

INCOSE Patterns Working Group
V1.3.1 10.28.2015
The INCOSE parent society Board of Directors made it a strategic objective to support the transformation of SE to a model-based discipline.

An Assistant Director (Troy Peterson) for this Transformation was appointed, and a plan of actions and deliverables adopted.

– [http://www.incose.org/about/strategicobjectives/transformation](http://www.incose.org/about/strategicobjectives/transformation)

Among the products: The MBE Transformation Roadmap, a planning and assessment instrument for progress in model-based methods.

Initial minimal product version was shown and piloted at Agile Health Care Systems 2016, at Energy Tech 2016, at IW2017 MBSE Workshop, and at IW 2017 CAB meeting,

Initial Model Stakeholder Features being piloted in INCOSE support for the ASME Model VVUQ project.

What does it mean to become a model-based discipline?

– The Stakeholder Features of Models, and how they support the overall discipline

An SE view: Model-based ISO15288 processes and life cycle stages

– ISO15288 is not agile incompatible and is not waterfall

## Stakeholders in A Successful MBSE Transformation
(showing their related roles and parent organizations)

### Model Consumers (Model Users):

<table>
<thead>
<tr>
<th>Role</th>
<th>X</th>
<th>X</th>
<th>X</th>
</tr>
</thead>
<tbody>
<tr>
<td>** Non-technical stakeholders in various Systems of Interest, who acquire / make decisions about / make use of those systems, and are informed by models of them. This includes mass market consumers, policy makers, business and other leaders, investors, product users, voters in public or private elections or selection decisions, etc.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>** Technical model users, including designers, project leads, production engineers, system installers, maintainers, and users/operators.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Leaders responsible to building their organization’s MBSE capabilities and enabling MBSE on their projects</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Model Creators (including Model Improvers):

<table>
<thead>
<tr>
<th>Role</th>
<th>X</th>
<th>X</th>
<th>X</th>
</tr>
</thead>
<tbody>
<tr>
<td>* Product visionaries, marketers, and other non-technical leaders of thought and organizations</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* System technical specifiers, designers, testers, theoreticians, analysts, scientists</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Students (in school and otherwise) learning to describe and understand systems</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Educators, teaching the next generation how to create with models</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Researchers who advance the practice</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Those who translate information originated by others into models</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Those who manage the life cycle of models</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Complex Idea Communicators (Model "Distributors"): 

<table>
<thead>
<tr>
<th>Role</th>
<th>X</th>
<th>X</th>
<th>X</th>
</tr>
</thead>
<tbody>
<tr>
<td>** Marketing professionals</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>** Educators, especially in complex systems areas of engineering and science, public policy, other domains, and including curriculum developers as well as teachers</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>** Leaders of all kinds</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Model Infrastructure Providers, Including Tooling, Language and Other Standards, Methods:

<table>
<thead>
<tr>
<th>Role</th>
<th>X</th>
<th>X</th>
<th>X</th>
</tr>
</thead>
<tbody>
<tr>
<td>* Suppliers of modeling tools and other information systems and technologies that house or make use of model-based information</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Methodologists, consultants, others who assist individuals and organizations in being more successful through model-based methods</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>* Standards bodies (including those who establish modeling standards as well as others who apply them within other standards)</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### INCOSE and other Engineering Professional Societies

<table>
<thead>
<tr>
<th>Role</th>
<th>X</th>
<th>X</th>
</tr>
</thead>
<tbody>
<tr>
<td>* As a deliverer of value to its membership</td>
<td></td>
<td></td>
</tr>
<tr>
<td>* As seen by other technical societies and by potential members</td>
<td></td>
<td></td>
</tr>
<tr>
<td>* As a great organization to be a part of</td>
<td></td>
<td></td>
</tr>
<tr>
<td>* As promoter of advance and practice of systems engineering and MBSE</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
Agility Through Shared Patterns in Regulated Domains

• In domains where innovation is subject to regulation (e.g., Health Care, Aviation, Automotive, etc.), agility may seem to have special challenges:
  – This conference is already aware of efforts to accommodate agile methods while meeting regulatory goals (e.g., safety).

• A powerful way to view efforts to find agreed-upon approaches is to think of them as agreements concerning shared system pattern frameworks:
  – MBSE extension of idea already applied to Devices of limited vs. greater changes
Agility Through Shared Patterns in Regulated Domains

• Example: The Model VVUQ Pattern, being examined in the ASME Model VVUQ standards and guidelines effort:
  – How can evidence be provided to most efficiently demonstrate evidence of model VVUQ?
  – The over effort already includes FDA, FAA, others
• In break-out, we will take the related Model System Features for a test drive

(Substantially all the ISO15288 processes are included in all four Manager roles)
Conclusions from 2016 INCOSE AHCS Conference Break-Out Session

• During the 2016 version of this conference, participants used the ASELCM Pattern to identify Health Care Domain systems that they deemed:

- Needs for improved future agility (even if most difficult)
- Opportunities for improved future agility (low-hanging fruit)
- Already accomplished examples of improved agility progress (e.g., defense theater medicine, device software, etc.)
Conclusions from 2016 INCOSE AHCS Conference Break-Out Session

- Needs for improved future agility (even if most difficult)
- Opportunities for improved future agility (low-hanging fruit)
- Already accomplished examples of improved agility progress (e.g., defense theater medicine, device software, etc.)
Conclusions from 2016 INCOSE AHCS Conference Break-Out Session

Red:
- Patient Interface to Health Care (Including Insurance)
- Medical Devices and Equipment Supplier

Break Out Session:
Agile Test Drive, Hot Spot Collection

During this break out session, use the hand-outs to:

• **Identify Health Care Domain areas** you believe are opportunities, problems, and accomplishments for an **Agile approach**—discuss at session end, turn in.

• **Identify ISO 15288 areas** you believe are opportunities, problems, and accomplishments for an **Agile** as well as **MBSE methods**—discuss at session end, turn in.

• Review and comment on the **INCOSE Feature Pattern for Model Stakeholders**—discuss at session end, turn in.

• This also gives INCOSE some “agile feedback” on its products in process.

• In return, you will also have “**take home copies**” that you can carry home (or download) and try out privately.
