OMG Issue No: 16492

Title: Constraints

Source: NIST (Mr. Conrad Bock, conrad.bock(at)nist.gov)

Summary:

The spec currently has no constraint sections. Should we add them? For example, we might require unowned diagram elements to be diagrams.

Resolution:

This was received before the DD 1.1 RTF comment deadline of March 31, 2012, but was not addressed by the RTF due to lack of time.

OMG Issue No: 18680

Title: Consider possibility of adding Port concept to DI

Source: Fraunhofer FOKUS (Mr. Max Bureck, max.bureck(at)fokus.fraunhofer.de)

Summary:

Hi, the concept of ports, attached to the outside bounds of an element allowing connections between elements is a widespread concept. Adding this concept would help generic layouting algorithms taking ports into account (such as KIELER) doing a much better job. Since DI defines abstract subclasses, meta models without ports can simply choose to not use the concept.

Resolution:

This was received after the DD 1.1 RTF comment deadline of March 31, 2012.
