

Identity-verified

[Return to Glossary](#)

Identity-verified is ...

Financial institutions in the United States are subject to robust rules that are designed to combat money laundering and the financing of terrorism. A CBDC would need to be designed to comply with these rules. In practice, this would mean that a CBDC intermediary would need to **verify** the **identity** of a person accessing CBDC, just as banks and other financial institutions currently verify the identities of their customers.
