MBX Ecosystems Challenge Team

Purpose

This challenge team collaborates on pre-competitive capabilities that help organizations better define and manage their MBX ecosystems. We officially kicked off at IW19 (Jan 2019) based on prior workshops at IW15, IW17, and IW18 organized by the INCOSE MBSE [Modeling & Simulation Interoperability \(MSI\) Challenge Team](#).

In simple terms, your MBX ecosystems consist of the models, tools, processes, and people/roles that come together to develop the systems/products that your organization cares about.

But an ecosystem can be broader than that, depending on the scope you are concerned about. For example some organizations utilize their ecosystems to also support the operation of their systems/products. And some organizations include cross-project libraries and methods in their ecosystems, as well as interconnections with their supply chain ecosystems.

If these type of ecosystems are of interest to you, come and join us to help move things forward!

MBX = model-based X, where X includes engineering (MBE), systems engineering (MBSE), manufacturing (MBM), test (MBT), operations (MBO), ..., enterprise (MBE), sales/application engineering (MBSAE), ..., living (MBL), and so on.

Context: What is an “MBX Ecosystem”?

Early Example in INCOSE MBSE Initiative

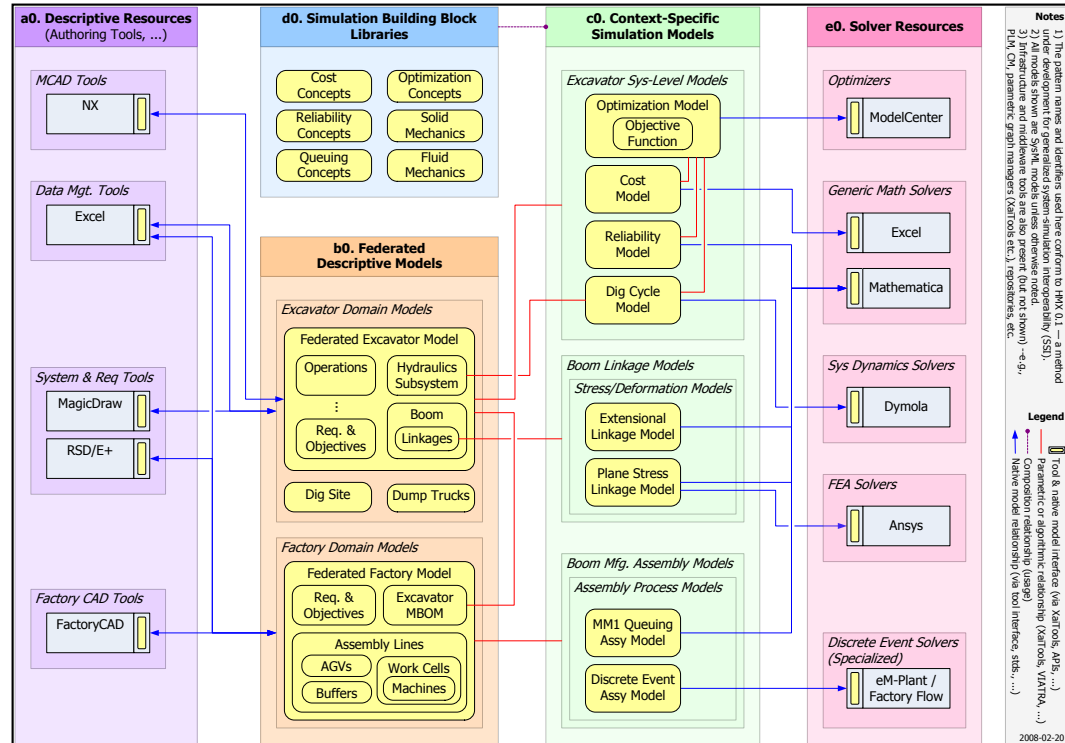

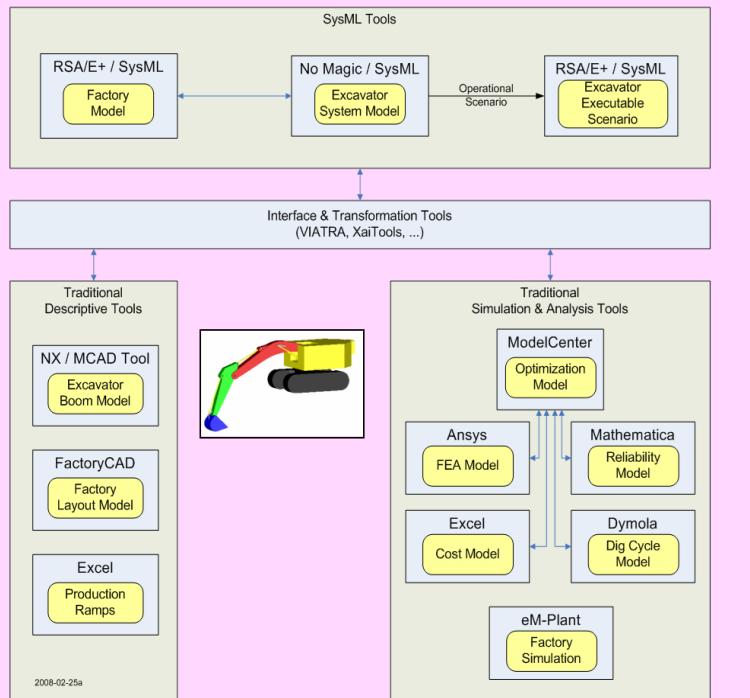

Prototype SysML-based MBX Ecosystem for Excavator Systems

Case study c.2008-2010 in Georgia Tech project sponsored by Deere and Lockheed Martin

<http://www.pslm.gatech.edu/projects/incose-mbse-msi/> including presentations at IW09 and IW10

View1: Tool Categories (with coarse-grain connections)

View2: Model Architecture - Patterns & Tools (with medium-grain connections)

Notes
 1) The pattern names and interfaces used here conform to IAXX 0.1 - a method under development for generalized system simulation interoperability (SSII).
 2) All models shown are SysML models unless otherwise noted.
 3) Architecture and middleware tools are also present (but not shown) - e.g., PEX, C#, parametric graph managers (all tools), repositories, etc.
Legend
 [Solid Blue Arrow] Tool & native model interface (via XAI tools, APIs, ...)
 [Dashed Blue Arrow] Federated or aggregate relationship (via tools, VIATRA, ...)
 [Red Arrow] Native model relationship (via tool interface, stubs, ...)

Context: What is an “MBX Ecosystem”?

Generic Example - OMG SysML v2 RFP (SysML model excerpt)

Context & Terminology (Informal)

MBX Ecosystem Management

- ◆ **MBX**, where X = MBE, MBSE, MBM, ...
- ◆ **Ecosystem** = combined system of tools, models, products, repositories, interconnections, people, processes, workflows, ... [a “system of systems” - largely computer-based]
 - Level 1 – Overall ecosystem for organization X
 - Level 2 – Division sub-ecosystems
 - Level 0 – Level 1 in a global ecosystem with interfaces to ecosystems of customers, suppliers, regulators, ...
- ◆ **Management** = handling all ecosystem lifecycle phases
 - Vision/concepts, prototype, preliminary design, detailed design, deployment, maintenance, updates, migration, decommissioning
- ◆ Therefore, treat your MBX ecosystem as a system!
 - Apply systems engineering principles (“Alpo” approach) w/ ecosystem know-how
- ◆ Similar terms: system development environment, decision support system, modeling & simulation framework, ...

MBX Ecosystem Metrics & Objectives *Benefits of SysML-based MBE/MBSE Approach*

Primary Impacts <i>enterprise MOEs (measures of effectiveness)</i>	Reduced Time	Reduced Cost	Reduced Risk	Increased Understanding	Increased Corporate Memory	Increased Artifact Performance
<i>ecosystem MOPs (measures of performance)</i>						
Enabling Capabilities						
Increased Knowledge Capture & Completeness			■	■	■	■
Increased Modularity & Reusability	■	■	■	■	■	
Increased Traceability			■	■	■	
Reduced Manual Re-Creation	■	■	■			
Increased Automation	■	■	■			
Reduced Modeling Effort	■	■				
Increased Analysis Intensity			■			■

*Precision Knowledge
for the
Model-Based Enterprise*

OpenMBEE: An Open Framework for MBX Ecosystems

www.openmbee.org

Simplified View:

- A practical combination of commercial tools and open-source tools within an extensible framework
- Includes “model-based wiki”-like capabilities
 - Exposes rich underlying SysML models as web pages
 - Engages project members who do not know SysML

Project TMT-test - TMT-APS-SE - TMT-APS DDD - TMT-APS DDD Branch: m

 - ▶ 6.3 Assembly Layer
 - ▶ 6.4 Adherence to TMT Commc

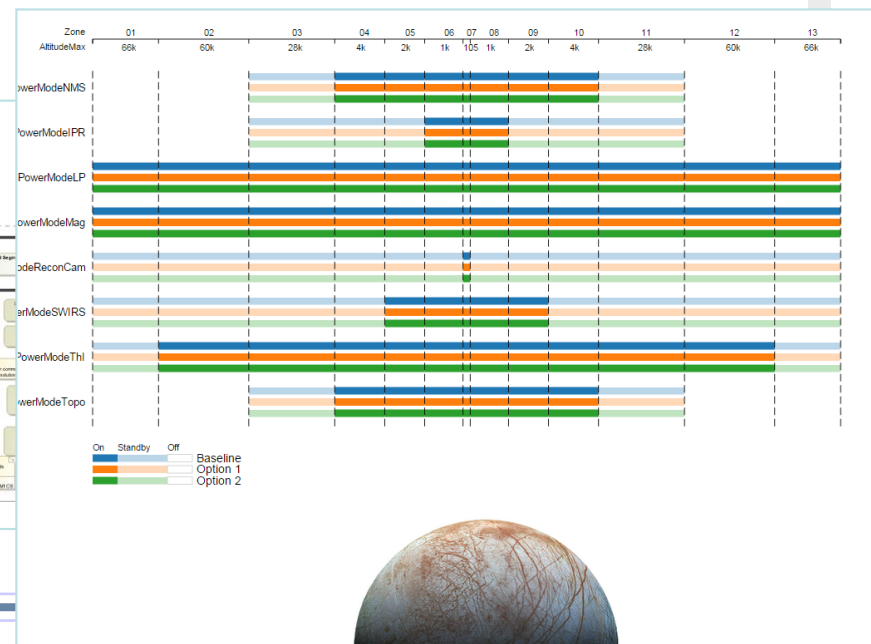

APS will use starlight to measure the wavefront errors and then will determine the appropriate commands to send to align the optics. Once the optics are aligned, the various control systems will record the set points for later use. In particular APS will align TMT by adjusting the following parameters as required.

- M1 segments in piston, tip, and tilt
- M1 segment surface figure
- M2 piston and tip/tilt (or x/y-decenter)
- M3 tip and rotation

APS will align the telescope at various elevation angles and then from lookup tables will be generated to correct for gravity-induced deformat various temperatures over time, and lookup tables will be built as a fun necessary data, but the lookup tables will be generated by the TMT of Approximately every two weeks six segments will be exchanged in TM installed segments in piston, tip, and tilt, and to correct the segment fig secondary rigid body motions. The APS measurements and associate hours of observation time. In general our experience at Keck is that AF are no segment exchanges to ensure that the telescope remains prop minutes of observation time. Initial APS operations will be conducted with the APS on the elevation However, after early operations the APS might be moved to a position

Ecosystems/OpenMBEE Community Info

www.openmbee.org

- ~200 participants in email list / google group
- ~35 participants in biweekly webcons (started ~Feb 2017)
- ~45 participants in biweekly developer webcons
- Formalized as a Challenge Team in the INCOSE MBSE Initiative (Jan 2019)
- Semi-public OpenMBEE instance (*thanks to No Magic, Inc*)
 - Used for collaboration on work by OMG / INCOSE / etc. (pre-competitive topics & resources)

OpenMBEE Users: Deployments as of Jan 2018

(per responses from participants in IW18 workshop - Jan 23, 2018)

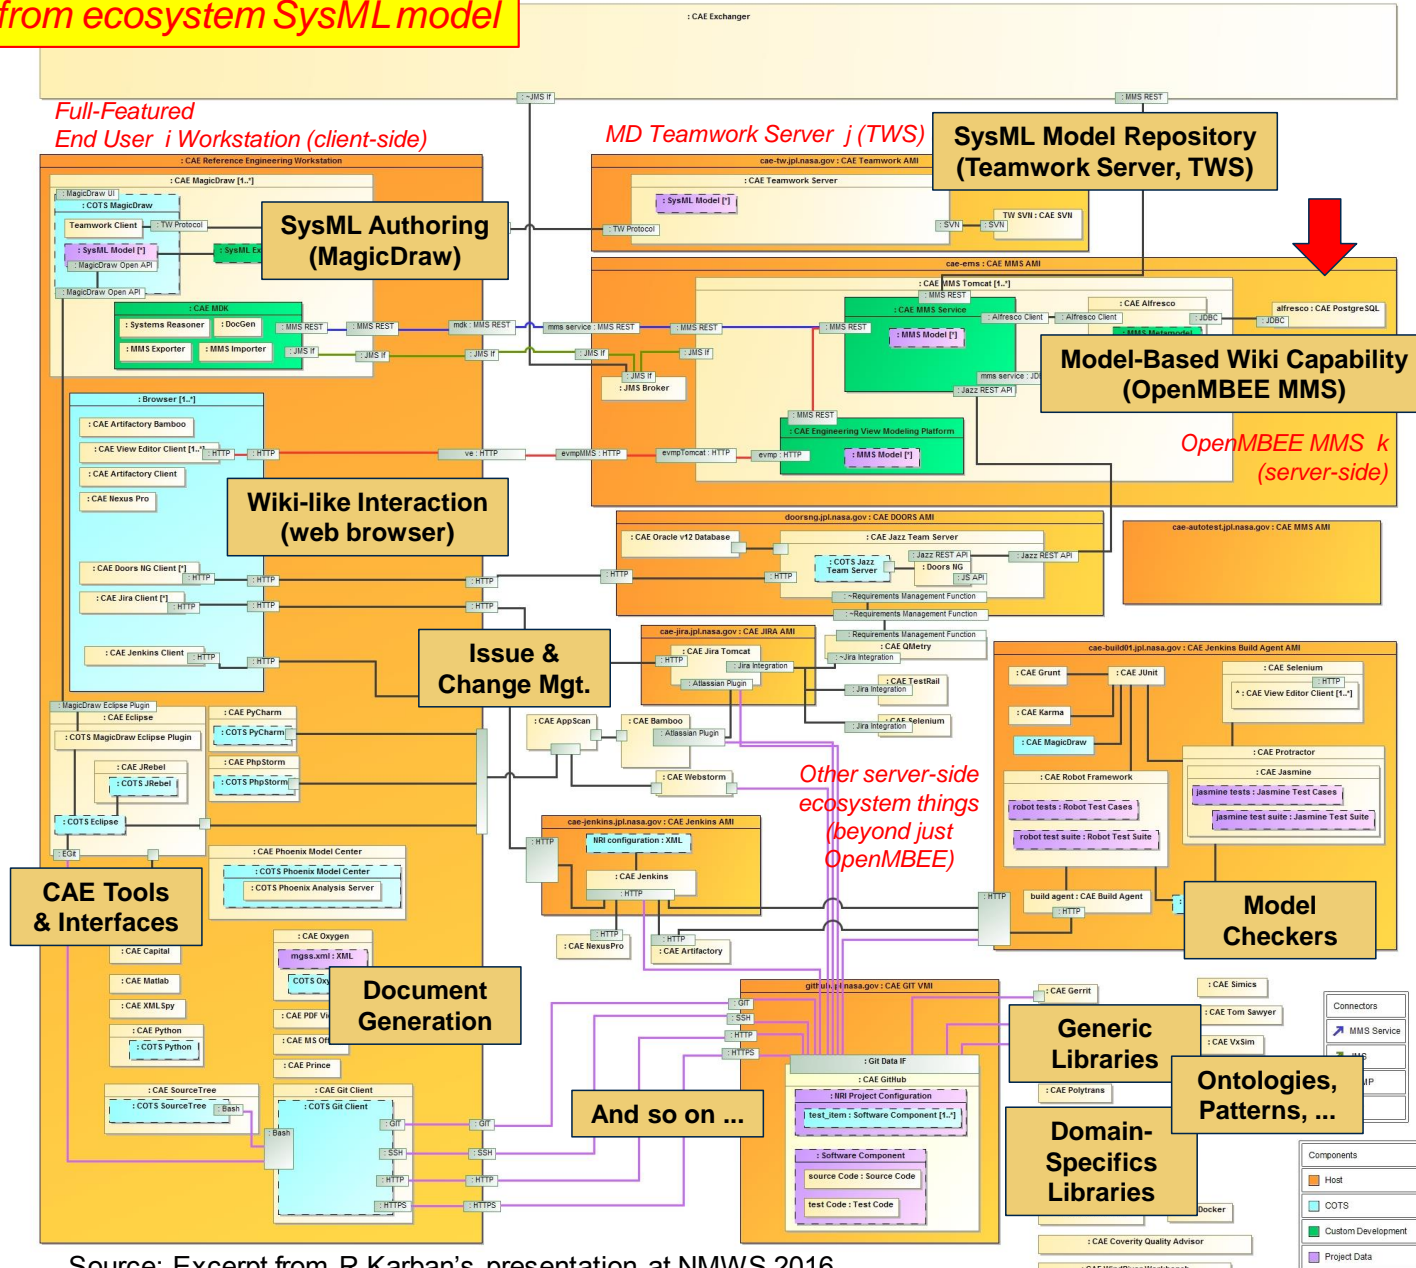

Organization	Projects Using OpenMBEE	OpenMBEE Deployment Status
Boeing	Various programs (<i>it is their enterprise model-based solution</i>)	Production
Ford	Various pilots	<i>Pilot</i>
GT/ASDL	~5 research projects/demos	<i>Pilot/Demo</i>
GTRI	Various projects (<i>after setup is ready</i>)	<i>WIP</i>
Lockheed	Various programs	Production
NASA JPL	~8 main flight projects (Europa Clipper, Mars 2020, Mars Sample Return, ...)	Production
OMG ^[1]	SysML 1.x spec; SysML v2 SST proposal	Production
Stevens/SERC	Several research projects/demos	<i>Pilot/Demo</i>
www.tmt.org ^[1]	Thirty Meter Telescope (TMT)	Production
