Apollo Guidance Computer (1966)

- 1st IC-based computer
- 2k core, 36k 'rope' memory
- 11.72 micro-second cycle
- 55 Watts
- 70 lbs
- 24" x 12.5" x 6.5"

Extracting information from text is like extracting sunshine from a cucumber

Justification: Paper/text is not scalable...

- **Complex systems are everywhere...**
- **They are the norm, not the exception**
- **They require systems/cross-domain thinking to be successful**
- **Current processes are not scalable to the complexity, magnitude,..**
- **Failures are expensive**
- **Model-based systems world is coming**

“You’re not going to lay out a billion-gate integrated circuit by hand in your life-time” 1972 Dr. Charles Rose at TI (Inventor of HDL’s)

“...no two BMW 5 series sold last year were the same.”

~5000 sensors, ECU’s, etc. communicating over 9000 connections via 1,000,000+ types of messages, performing 2000+ functions in triple-redundant, physically separated fashion with each tail number a different configuration
