WS3 notes Thursday 29 September

Back to Shared Semantics

Back to start

This week we went through a number of different scenarios in which we may want to cross reference terms in FIBO to those in normative external standards.

Will have “Treatments” for each of a number of scenarios:

- Standard ontologies where
  - We want to use only a small subset of the terms
  - We want to use the whole thing
  - We want to use one aspect of the ontology (e.g. classes but not axioms)
2. Standard ontologies which are:
   - Well modeled in OWL
   - Not well modeled but presented in OWL
   - Not in OWL but still ontologies
   - Standards which are not formal ontologies

   Other considerations include

   - Degree of adoption or uptake of the standard
   - How authoritative it is for its subject matter

   The details for this are captured in a new working Document.
