

Sample

[Return to Glossary](#)

The data values associated with a Topic, passed between applications are known as [DDS Samples](#). A sample represents an atom of data information as returned by a [Data Reader's](#) read/take operations. It consists of two parts; SampleInfo and the Data itself. The Data part is the data as produced by the Publisher. The Sample Info contains additional information related to the data provided by the [data_distribution_service_dds](#) such as a unique [key](#) and its associated [QoS](#) policies.
