

User Story

[Return to Glossary](#)

A **User Story** is an informal, natural language description of one or more features of a software system. A user story is a tool used in Agile software development to capture a description of a software feature from an end-user perspective. A user story describes the type of user, what they want and why. A user story helps to create a simplified description of a requirement.

In the [agile](#) development process, **User Stories** are often recorded on index cards, on Post-it notes, or in [project management software](#). Depending on the project, user stories may be written by various stakeholders such as clients, users, managers or development team members.
