## Purpose

The *goal* of this specification is to define the means for applications using standard web protocols to participate as first-class citizens as publishers and subscribers of data in the *data\_distribution\_service\_dds* Global Data space. This participation is realized by exposing a WebDDS Object Model and making it accessible as a web service, a REST resources, or some other standard web protocol. Exposing access via these web-friendly protocols allow applications built on various technology stacks (e.g. JavaScript, Python, PHP, Perl , etc.) to communicate with native DDS applications.
