

2.2.2.3.1.4 Wallets

[return to Immutable Data Objects](#)

Wallets are not quite like physical wallets carried around in pockets or handbags. They are repositories where the cryptographic **keys** associated with the **fungible** data managed by the **ledger** are stored. These keys are required to unlock access to the fungible data in the ledger. For example, within the **Bitcoin Blockchain**, there is an **identifier** associated with each Bitcoin. To use the Bitcoin, a public and a **private key** are required. The private keys are stored in the **wallet**.
