

2 Architectural Views

[return to Reference Architecture \(RA\)](#)

The DIDO Reference Architecture (RA) is presented as a series of components collected into different views. The components are then associated with a set of standards relevant to each component. There are two kinds of standards provided, each produced by different kinds of standards bodies:

- [tech](#)
- [defact](#)

There are three main categories of Architectural Views:

- [1_stakeholder](#)
- [2_tech_views](#)
- [3_taxonomic](#)
