

Block Header

[Return to Glossary](#)

A **Block Header** is used to identify a particular block on an entire [Blockchain](#) and is hashed repeatedly to create [Proof of Work \(PoW\)](#) for [dido:public:ra:xapend:xapend.a_glossary:m: mining]] rewards. A blockchain consists of a series of various blocks that are used to store information related to transactions that occur on a blockchain network. Each of the blocks contains a unique header, and each such block is identified by its **block header** hash individually.
