

Backus-Naur Form (BNF)

[Return to Glossary](#)

Backus-Naur Form or **Backus Normal Form (BNF)** is a metasyntax notation for context-free grammars, often used to describe the [syntax](#) of languages used in computing, such as computer [programming languages](#), document formats, instruction sets and communication protocols. They are applied wherever exact descriptions of languages are needed: for instance, in official language specifications, in manuals, and in textbooks on programming language theory.

Many extensions and variants of the original Backus-Naur notation are used; some are exactly defined, including extended Backus-Naur form (EBNF) and augmented Backus-Naur form (ABNF).
