

Common Intermediate Language (CIL)

[Return to Glossary](#)

Common Intermediate Language (CIL), formerly called Microsoft Intermediate Language (MSIL) or Intermediate Language (IL),^[1] is the intermediate language binary instruction set defined within the Common Language Infrastructure (CLI) specification.^[2] CIL instructions are executed by a CLI-compatible runtime environment such as the [Common Language Runtime \(CLR\)](#). Languages which target the CLI compile to CIL. CIL is object-oriented, stack-based bytecode. Runtimes typically [just-in-time](#) compile CIL instructions into native code.
