

# Delegated Byzantine Fault Tolerant (dBFT)

[Return to Glossary](#)

**Delegated Byzantine Fault Tolerant (dBFT)** is a consensus mechanism that was made popular by a cryptocurrency called NEO. dBFT essentially works in a similar fashion to a country's governance system, having its own citizens, delegates, and speakers to ensure that the country (Node Network) is functional. The method is closer to [proof\\_of\\_stake\\_pos](#) rather than [proof\\_of\\_work](#), by utilizing a voting system to choose delegates and speaker.
