

Delegated Byzantine Fault Tolerant (dBFT)

[Return to Glossary](#)

Delegated Byzantine Fault Tolerant (dBFT) is a consensus mechanism that was made popular by a cryptocurrency called NEO. dBFT essentially works in a similar fashion to a country's governance system, having its own citizens, delegates, and speakers to ensure that the country (Node Network) is functional. The method is closer to [Proof of Stake \(PoS\)](#) rather than [Proof of Work \(PoW\)](#), by utilizing a voting system to choose delegates and speaker.
