

DIDO Domain Community

[Return to Glossary](#)

DIDO Domain Community is the lowest level Community of Interest (CoI). The Domain has a sub-charter approved by the Ecosphere. The Domain usually relies on the Ecosphere for Bylaws and Policies and Procedures (P&P) but can provide addendums that do not conflict with the Ecosphere. The primary role of the Domain is to produce a product which meets the Functional and Non-Functional Requirements of the Ecosystem and the Ecosphere. As a general rule, the Ecosystem does not actually build or deploy anything but acts as the integrator and coordinator all the Domains it is responsible for. The Domain may have more Intellectual Property (IP) Rights can not be in conflict with the Ecosystem and can only subset the copyrights allowed by the Ecosystem.

The Domain role is to build products as per the requirements and maintain products as according to the issue tracking system. The Domain is responsible for all testing at the domain level.
