

# Dynamic Link Library (.dll)

[Return to Glossary](#)

A **Dynamic Link Library (.dll)** is a [Relocatable Objects\]\]](#) (i.e., shared program [module](#)) with ordered code, methods, functions, enums and structures that may be dynamically called by an executing program during run time. A DLL usually has a file extension ending in .dll. Other file extensions are .drv and .ocx.

DLLs were developed by Microsoft and work only with the Windows [Operating System \(OS\)](#).
