

Encryption

[Return to Glossary](#)

Encryption is the process of using an [Encryption Algorithm](#) or [Cryptographic Algorithm](#) to transform information to make it unreadable for unauthorized users. This cryptographic method protects sensitive [Plaintext](#) such as credit card numbers by encoding and transforming information into unreadable [cyphertext](#). This encoded data may only be decrypted or made readable with a [key](#). Symmetric-key and asymmetric-key are the two primary types of encryption.

Encryption is essential for ensured and trusted delivery of sensitive information.
