

Fault Tolerance

[Return to Glossary](#)

[See 2.2.2.3 Fault Tolerance](#)

Fault Tolerance is the ability of a system to respond gracefully to an unexpected hardware or software failure. There are many levels of fault tolerance, the lowest being the ability to continue operation in the event of a power failure. Many fault-tolerant computer systems mirror all operations - that is, every operation is performed on two or more duplicate systems, so if one fails the other can take over.
