

Information Security (IS/InfoSec)

[Return to Glossary](#)

Information security, often referred to as **InfoSec**, is designed to protect the confidentiality, integrity and [availability](#) of computer system data from those with malicious intentions. Confidentiality, integrity and availability are sometimes referred to as the CIA Triad of information security. This triad has evolved into what is commonly termed the Parkerian hexad, which includes confidentiality, possession (or control), integrity, authenticity, availability and utility
