Plaintext

Return to Glossary

Plaintext is intelligible data that has meaning and can be understood without the application of decryption[1)].

Plaintext is usually ordinary readable text before it is Encrypted into ciphertext, or readable text after it is Decrypted.

Data input to or output from Encryption Algorithms is not always **Plaintext**. For example, when data is super-encrypted, or encrypted more than once using different Encryption Algorithms, only the input to the first encryption method is considered **Plaintext**.
