

Port Number

[Return to Glossary](#)

A **Port Number** is the logical address of each [application](#) or process that uses a network or the [Internet](#) to communicate. A port number uniquely identifies a network-based application on a computer. Each application/program is allocated a [16-Bit](#) integer port number. This number is assigned automatically by the [OS](#), manually by the user or is set as a default for some popular applications.
