

Proof of Stake (PoS)

[Return to Glossary](#)

Proof of Stake (PoS) is a way of achieving consensus by distributing [validation](#) of a block of transactions based on the number of [tokens](#) held rather than by rewarding miners like [Proof of Work \(PoW\)](#). Consequently, PoS is a way of validating a block that requires far less energy than Proof of Work (PoW). An important key aspect of PoS is including a degree of chance to the selection process to avoid a scenario where the richest users are always selected to validate transactions and consistently reap the rewards or to bias validation in their favour.
