

# Random access memory (RAM)

[Return to Glossary](#)

**Random access memory (RAM)** is a type of data storage used in computers that is generally located on the [motherboard](#). This type of memory is volatile and all information that was stored in RAM is lost when the computer is turned off. Volatile memory is temporary memory while [Read-Only Memory \(ROM\)](#) is non-volatile and holds data permanently when the power is turned off.
