

Reduced Instruction Set Computer (RISC)

[Return to Glossary](#)

Reduced Instruction Set Computer (RISC) is a computer that uses a [Central Processing Unit \(CPU\)](#) that implements the [processor design principle](#) of simplified instructions. To date, RISC is the most efficient CPU architecture technology.

This architecture is an evolution and alternative to [Complex Instruction Set Computer \(CISC\)](#). With RISC, the basic concept is to have simple instructions that do less but execute very quickly to provide better [performance](#).
