

Soft Fork

[Return to Glossary](#)

a soft fork (or sometimes softfork) is a change to the software protocol where only previously valid blocks/transactions are made invalid. Since old nodes will recognize the new blocks as valid, a softfork is backward-compatible. This kind of fork requires only a majority of the miners upgrading to enforce the new rules, as opposed to a [hard fork](#) which requires all nodes to upgrade and agree on the new version.
