

Sequenced Packet Exchange (SPX)

[Return to Glossary](#)

Sequenced Packet Exchange (SPX) is a [protocol](#) in the IPX/SPX protocol stack that corresponds to a connection-oriented [transport layer](#) protocol in the [OSI Model](#). Being reliable and connection-oriented, it is analogous to the [Transmission Control Protocol \(TCP\)](#) of [TCP/Internet Protocol \(IP\)](#), but it is a datagram protocol, rather than a stream protocol.
