

Syntax_error

[Return to Glossary](#)

Syntax_error is an error that occurs when a compiler or interpreter cannot understand the [dido:public:ra:xapend:xapend.a_glossary:s:sourcecode]] statement using the published [Syntax](#) for that Source Code in order to generate machine code. **Syntax Errors** and “Semantic Errors” are not the same. The **Syntax Error** is an incorrect construction of the Source Code, whereas a “Semantic Error” is erroneous logic that produces the wrong result when executed. See syntax, parse and semantic error.
