

Transport layer security (TLS)

[Return to Glossary](#)

Transport layer security (TLS) is a [protocol](#) that provides communication security between client/[server](#) applications that communicate with each other over the [Internet](#). It enables privacy, [integrity](#) and protection for the data that's transmitted between different nodes on the Internet. TLS is a successor to the [Secure Sockets Layer \(SSL\)](#) protocol.

See: [RFC2818 - HTTP Over TLS \(HTTPS\)](#)
