

# Web Application (Web App)

[Return to Glossary](#)

A **Web Application (Web App)** is [application](#) software that runs on a web server, unlike computer-based software programs that are run locally on the operating system (OS) of the device. Web applications are accessed by the user through a web browser with an active network connection. These applications are programmed using a [Client-Server](#) modeled structure—the user (“[Client](#)”) is provided services through an off-site [Server](#) that is hosted by a third-party. Examples of commonly-used web applications include: web-mail, online retail sales, online banking, and online auctions.
