

Bitcoin: Guide 1 Blockchain

[return to Bitcoin Guides](#)

☐ [nick]is this how you wanted to hide the disclaimer? I had to put it on the bottom to make it work right btw

Overview

The block chain provides Bitcoin's public ledger, an ordered and timestamped record of transactions. This system is used to protect against double spending and modification of previous transaction records. [Blockchain Guide](#)

Introduction

Each full node in the Bitcoin network independently stores a block chain containing only blocks validated by that node. When several nodes all have the same blocks in their block chain, they are considered to be in consensus. The validation rules these nodes follow to maintain consensus are called consensus rules. This section describes many of the consensus rules used by Bitcoin Core.
