

GIT (Revision Control)

[return to the de facto Standards area](#)

Source: [The following is from the English Wikipedia on GIT](#)

Git (/ɡɪt/)¹⁾ is a distributed version-control system for tracking changes in source code during software development.²⁾ It is designed for coordinating work among programmers, but it can be used to track changes in any set of files. Its goals include speed,³⁾ data integrity,⁴⁾ and support for distributed, non-linear workflows.⁵⁾

Git was created by Linus Torvalds in 2005 for development of the Linux kernel, with other kernel developers contributing to its initial development.⁶⁾ Its current maintainer since 2005 is Junio Hamano.

As with most other distributed version-control systems, and unlike most client-server systems, every Git directory on every computer is a full-fledged repository with complete history and full version-tracking abilities, independent of network access or a central server.⁷⁾

Git is free and open-source software distributed under the terms of the GNU General Public License version.

[nick][✓ nick, 2020-05-17]Which GNU License Version?? Or does it matter? If not, then why not just say GNU General Public License?

Table 1: Data Sheet for GIT.

Characteristic	Value
Original author(s)	Linus Torvalds ⁸⁾
Developer(s)	Junio Hamano and others ⁹⁾
Initial release	7 April 2005;
Stable release	2.21.0 / 24 February 2019; ¹⁰⁾
Repository	git.kernel.org/pub/scm/git/git.git/
Written in	C, Shell, Perl, Tcl, Python ¹¹⁾
Operating system	POSIX: Linux, Windows, macOS
Available in	English
Type	Version control
License	
Website	https://git-scm.com/
