Android is a mobile operating system developed by Google. It is based on a modified version of the Linux kernel and other open source software, and is designed primarily for touchscreen mobile devices such as smartphones and tablets. In addition, Google has developed Android TV for televisions, Android Auto for cars, and Wear OS for wrist watches, each with a specialized user [interface](#). Variants of Android are also used on game consoles, digital cameras, PCs and other electronics.

Android is also associated with a suite of proprietary software developed by Google, called [Google Mobile Services \(GMS\)](#),¹⁾ that frequently comes pre-installed on devices. This includes core apps such as Gmail, the [application](#) store/digital distribution platform Google Play and associated Google Play Services development platform, and usually includes the Google Chrome web browser and Google Search app. These apps are licensed by manufacturers of Android devices certified under standards imposed by Google, but AOSP has been used as the basis of competing Android ecosystems such as Amazon.com's Fire OS, which use their own equivalents to Google Mobile Services.
