

# Linux Foundation: Open Middleware Agnostic Messaging API (OpenMAMA)

[return to the Linux Foundation](#)

**Note:** The following is an excerpt from the official OpenMAMA site. It is provided here as a convenience and is not authoritative. Refer to the original document as the authoritative reference.

**OpenMAMA**, the Open Middleware Agnostic Messaging *API*, is a lightweight vendor-neutral integration layer for systems built on top of a variety of message orientated *middlewares*. The objective of OpenMAMA is to enable users to develop high-*performance*, event driven applications against a single standard API, while providing a mechanism for easily switching between *middlewares* as requirements evolve.

Table 1: Data sheet for Open Middleware Agnostic Messaging [API](#),

Title	Open Middleware Agnostic Messaging API,
Acronym	OpenMAMA
Version	6.2.3
Operating Systems	Linux Windows <sup>1)</sup>
Downloads	<a href="https://www.openmama.org/downloads">https://www.openmama.org/downloads</a>
Repository	<a href="https://github.com/OpenMAMA/OpenMAMA/">https://github.com/OpenMAMA/OpenMAMA/</a>
Supported Languages	C, C++, C#, JNI <sup>2)</sup>
License	LGPL v2.1 <sup>3)</sup>
Reference	<a href="https://www.openmama.org/">https://www.openmama.org/</a>
