Summary

ISO/IEC 25012:2008 defines a general data quality model for data retained in a structured format within a computer system.

ISO/IEC 25012:2008 can be used to establish data quality requirements, define [data quality](#) measures, or plan and perform data quality evaluations. It could be used, for example,

- to define and evaluate data quality requirements in data production, acquisition and integration processes,*
- to identify data quality [assurance](#) criteria, also useful for re-engineering, assessment and improvement of data,*
- to evaluate the compliance of data with legislation and/or requirements.*
- ISO/IEC 25012:2008 categorizes quality attributes into fifteen characteristics considered by two points of view: inherent and system dependent. Data quality characteristics will be of varying importance and priority to different stakeholders.*

ISO/IEC 25012:2008 is intended to be used in conjunction with the other parts of the SQuaRE series of International Standards, and with ISO/IEC 9126-1 until superseded by ISO/IEC 25010.
