OASIS: eXtensible Access Control Markup Language (XACML)

return to the OASIS Standards

Table 1: Data sheet for eXtensible Access Control Markup Language (XACML)

Title	eXtensible Access Control Markup Language (XACML)
Acronym	XACML
Version	3.0
OASIS Document Number	acml-3.0-core-spec-os
Release Date	22 January 2013
About Specification	https://www.oasis-open.org/committees/tc_home.php?wg_abbrev=xacml
Document	http://docs.oasis-open.org/xacml/3.0/xacml-3.0-core-spec-os-en.html

Note: The following is an excerpt from the actual document. It is provided here as a convenience and is not authoritative. Refer to the original document as the authoritative reference.

Introduction

The eXtensible Access Control Markup Language (XACML) [XACML-3] defines an architecture and a language for access control (authorization). The language consists of requests, responses, and policies. Clients send a request to a server to query whether a given action should be allowed. The server evaluates the request against the available policies and returns a response. The policies implement the organization's access control requirements.https://tools.ietf.org/html/rfc7061
