

C.1.3 Networked Embedded Systems

[Return to Embedded Systems](#)

About

Networked Embedded Systems - are devices that are networked together as peers to provide a “system”. Some examples would be the sensors in a home security or home automation system. Some networked systems can contain hundreds of thousands of peers all working in harmony to monitor large operations such as a dam, an air traffic control system, or a hospital.

DIDO Specifics

To be added/expanded in future revisions of the DIDO RA
