

Ubuntu Linux

[Return to Operating Systems](#)

Ubuntu Linux is a Linux distribution based on Debian and mostly composed of free and [open-source software](#). Ubuntu is officially released in three editions: Desktop, [Server](#), and Core for [Internet of things](#) devices and robots. All the editions can run on the computer alone, or in a [virtual machine](#). Ubuntu is a popular [operating system](#) for cloud computing, with support for OpenStack. Ubuntu's default desktop has been GNOME, since version 17.10.

Ubuntu is released every six months, with long-term support (LTS) releases every two years. As of 22 October 2020, the most recent long-term support release is 20.04 (“Focal Fossa”), which is supported until 2025 under public support and until 2030 as a paid option. The latest standard release is 20.10 (“Groovy Gorilla”), which is supported for nine months.

Ubuntu is developed by Canonical, and a community of other developers, under a meritocratic governance model. Canonical provides security updates and support for each Ubuntu release, starting from the release date and until the release reaches its designated [End-of-life \(EoL\)](#) date. Canonical generates revenue through the sale of premium services related to Ubuntu.

Ubuntu is named after the Nguni philosophy of ubuntu, which Canonical indicates means “humanity to others” with a connotation of “I am what I am because of who we all are”.
