

Leased Proof of Stake (LPoS)

[Return to Consensus Mechanism](#)

Leased Proof of Stake (LPoS) is an enhanced version of the [Proof of Stake \(PoS\)](#) consensus mechanism that operates on the Waves [platform](#).

Unlike the regular Proof-of-Stake method where each [node](#) with some amount of [cryptocurrency](#) is entitled to add the next [blockchain](#), users can lease their balance to [full nodes](#) in this [consensus algorithm](#). And the one that leases the bigger amount to the full node has a higher probability of generating the next block. Also, the leaser is then rewarded with a percentage of the transaction fee that has been collected by the complete node.

This PoS variant is an efficient and safe option for the development of public cryptocurrencies. [Webpage: BHARDWAJ](#)
