

Proof of Importance (PoI)

[Return to Consensus Mechanism](#)

Proof of Importance (PoI) is a variation of PoS protocol that considers the role of shareholders and validators for its operation. However, this is not only influenced by the size and chance of their shares; various other factors like reputation, overall balance, and no. of transactions made through any particular address also play a role in it.

The networks based on POI consensus model are expensive to attack on and rewards users for contributing to the network's security.
