

5.4 Aggregate

[Return to DidoDLL](#)

An Aggregate is when a new Smart Contract is created from a collection of other Smart Contracts and the originally Smart Contracts no longer exist as entities. For example, a can of soup is an aggregate of a can, tomatoes, salt, and other sices. Each of the original objects contained within a Smart Contract are not part of the can of soup.

```
CREATE AGGREGATE CanOfSoup
  FROM Tomatoes,
        Salt,
        Spice,
        Water,
        Onion,
        Butter,
        Oregano,
        Broth
  WHERE Tomatoes.id = '$1' AND
        Salt.id = '$2' AND
        Spice.id = '$3' AND
        Water.id = '$4' AND
        Onion.id = '$5' AND
        Butter.id = '$6' AND
        Oregano.id = '$7' AND
        Broth.id = '$8'
  RECORD {"Tomatoes", Tomatoes.id} AND
        {"Salt", "Salt.id} and
        {"Spice", "Spice.id} AND
        {"Water", "Water.id} and
        {"Onion", "Onion.id} AND
        {"Butter", "Butter.id} and
        {"Oregano", "Oregano.id} AND
        {"Broth", "Broth.id}
  AS parents,
  "Canning" AS process;
```
