3.1.1 Stakeholder Communities

[Return to DIDO Communities Page](#)

Given that DIDOs are centered around stakeholders, a [stakeholder](#) community is key to creating a thriving community of stakeholders. Unless the target of a DIDO is a [private](#), [permissioned](#) network, there will be stakeholders that exist outside of any corporation and/or a corporation's customers or clients. In many cases, the stakeholder community will also include competitors or other participants (i.e., [supply chain](#) players) that want to integrate services around a common concept or idea. This common concept or idea is generally a distributed [object](#).

In other words, the stakeholder community is generally defined as people, groups, organizations, or businesses that have interest or concern in the distributed object. Stakeholders affect or are affected by the community's actions, objectives and policies.

A stakeholder community can be informal or formal. Informal communities are best described as a confederation of the willing and generally have one or more core participants who make decisions for the group. When the stakeholder community is large, broad and with sometimes competing stakeholders, these communities should be formal, well organized organizations (usually non-profit).

Note: Refer to Section [2.1 Stakeholder Views](#) for how the various stakeholder communities are organized, as well as the definitions and descriptions of [ecosphere](#), [ecosystem](#), and [domain](#). Also, it should be understood that each of these terms refer to a kind of [Community of Interest \(Col\)](#). Thus, saying “ecosphere” should be read as “ecosphere Col”. Likewise for “domain” and “ecosystem”.

Steps for Establishing an Ecosphere

Steps for establishing and building a formal [ecosphere Col](#)¹⁾

1. Define a Mission Statement
2. Select a Leadership Team as Governing Board
