

Delegated Byzantine Fault Tolerant (dBFT)

[Return to Glossary](#)

Delegated Byzantine Fault Tolerant (dBFT) is a consensus mechanism that was made popular by a cryptocurrency called NEO. dBFT essentially works in a similar fashion to a country's governance system, having its own citizens, delegates, and speakers to ensure that the country (Node Network) is functional. The method is closer to [proof_of_stake_pos](#) rather than [proof_of_work](#), by utilizing a voting system to choose delegates and speaker.
